

SYSTEMS ARCHITECTURE & GOVERNANCE

EXECUTIVE BRIEFING

CAREER MOBILITY GOVERNANCE FRAMEWORK

A Governed Integration Architecture for Military Learner Mobility

AI as Deterministic Constraint Infrastructure — Not Decision Automation

Robert McCoy
Indiana Wesleyan University

MSAI Candidate | AI Governance & Systems Architecture Research

April 1, 2026

CCME 2026 SYMPOSIUM

The Future Is Now: Educate, Engage, Empower
Track 1 — Military Learner Mobility and Career Alignment

Evidence Behind the Five Pillars

Documented fragmentation across systems requires governed integration

Military Learner Transitions

Fragmentation documented across DoD, VA, and Labor transition systems.

Career Mobility & Alignment

Empirical variability in wage outcomes and credential signaling across regions.

Credential Translation

Decentralized authority creates inconsistent employer recognition patterns.

Advising Tools & Decision Support

Limited cross-system integration and outcome visibility for advisors.

Voice of the Veteran

Documented barriers in translation, navigation, and equitable access.

Fragmented Ecosystem

INDEPENDENT AUTHORITATIVE DOMAINS

STRUCTURAL FRAGMENTATION

Independent authorities operating without coordinated mediation represent structural fragmentation inherent to decentralized governance, not organizational failure.

CMGF Integration Layer

Advisory and Guidance Flow

Processes individual service member scenarios against governed constraints.

Governance and Policy Binding Infrastructure

Encodes statutory law, accreditation standards, institutional policy, and funding rules into deterministic constraint logic.

Aggregate Insight and Institutional Reporting

Provides macro-level visibility into system performance, policy conflicts, and resource alignment.

Controlled Source of Truth Through Governed Federation

The system binds authoritative sources without centralizing ownership.

Integrated Decision Environment

Coherent Decision Outcomes

- Guided pathways
- Advisor support tools
- Leadership dashboards
- Coordinated signals across systems

Policy Feedback Visibility

Surfacing conflicts between authorities enables incremental policy harmonization.

Governed Signal Derivation

All signals derive strictly from authoritative sources and governed constraints, not algorithmic approximations or black-box models.

GOVERNANCE STATE

Governance Controls Active

GOVERNANCE CONTROLS & GUARDRAILS

Explicit Non-Use Guardrails

- ⊘ No predictive outcome modeling
- ⊘ No automated decision authority
- ⊘ No optimization objectives

Determinative Human Authority

Human advisors and learners remain the sole authority for consequential decisions. The system organizes information but does not replace judgment.

SOURCE OF TRUTH PRINCIPLE

"Truth originates from authoritative systems of record. CMGF mediates, validates, and explains without creating new authority."

FRAGMENTED ECOSYSTEM

EXPLICIT PROHIBITION OF PROFILING
AND ALGORITHMIC SCORING

CMGF INTEGRATION LAYER SUPPORTING TRACK 1 OUTCOMES

AI as a Governed Integration Infrastructure for Military Learner Mobility

CMGF CONSTRAINT BINDING INFRASTRUCTURE

CMGF OPERATIONAL ZONE

CMGF PRESERVATION ZONE

Controlled Source of Truth Through Governed Federation

INTEGRATED DECISION ENVIRONMENT

Coordinated Pathway Visibility

Multi-system pathway correlation

Policy-Aligned Decision Support

Encoded regulatory compliance

Cross-System Signal Integration

Federated data mediation

Veteran-Centric Governance

Protected decision authority

Decision Validation

Multi-source verification

THE FOUNDATION: AUTHORITY DECOMPOSITION MODEL

Governed Constraint Hierarchy for Military Education and Career Mobility Systems

INCREASING FLEXIBILITY

Tier D — Labor Market Descriptors

BLS and O*NET Data

INFORMATIONAL ONLY

Tier C — Institutional Policies

Transfer Agreements and Degree Requirements

INSTITUTION-SPECIFIC

Tier B — Credentialing Standards

Accreditation Bodies (e.g., ACEN, ABET, PMI)

CONDITIONAL

INCREASING AUTHORITY

Tier A — Statutory Authority

Federal and State Law (e.g., 38 U.S.C. § 3313)

ABSOLUTE

EXECUTIVE ORDER 14110

Human Oversight for
High-Impact Systems

CMGF ALIGNMENT:

Deterministic constraint architecture with
preserved human decision authority

OMB M-24-10

Transparency and
Impact Assessment

CMGF ALIGNMENT:

Authority-tagged signals with traceable constraint
logic and audit visibility

NIST AI RMF

Trustworthiness and
Accountability

CMGF ALIGNMENT:

Governance controls, audit logging, and
deterministic policy enforcement

CMGF GOVERNED INTEGRATION ARCHITECTURE

Governance Assurance: Every system signal is traceable to authoritative policy sources while preserving human decision authority.

Platform Modules

Select a module to explore its functionality

🕒 Planned

Part A: Service Member Hub

Self-service portal for transitioning service members to track their own progress, view adviso...

PRIMARY USERS

Service Members

Veterans

KEY FEATURES

- 🕒 View personal transition dashboard
- 🕒 Update progress milestones
- 🕒 Access skill translation tools

Enter Module →

💡 Concept

Part B: AI Services

Intelligent services layer providing skill translation, career pathway recommendations, resume...

PRIMARY USERS

ISR (system)

Service Member Hub (system)

+1

KEY FEATURES

- 🕒 Military-to-civilian skill translation
- 🕒 Career pathway matching based on profile
- 🕒 Resume content analysis and suggestions

Enter Module →

🟢 Active

Part C: ISR System

Primary platform for career counselors to manage and support military service members transitionin...

PRIMARY USERS

Career Advisors

Transition Counselors

+1

KEY FEATURES

- 🕒 View and filter service member pipeline by...
- 🕒 Access detailed service member profiles
- 🕒 Add and manage session notes

Enter Module →

DEMONSTRATION AND RESOURCES

Career Mobility Governance Framework (CMGF)

Interactive Demo and Downloads

<https://robertmccoyprojects.com/cmgf>

- Interactive CMGF advisory environment
- Architecture documentation (CMGF-01 through CMGF-03)
- Governance and design methodology artifacts
- Presentation materials and supporting research
