

Full Audit Report: robertmccoypromjcts.com

Date: February 24, 2026

Auditor: Manus AI

1. Executive Summary

The site restructuring was **partially successful**. The core CMGF end-to-end workflow on the main domain is now functional, which is a major victory for the CCME presentation. However, the Replit AI did **not** execute the requested site-wide restructuring. The root domain remains unchanged, and no `/research` or `/consulting` sections were created. Several legacy subdomains and pages are now either redundant or misaligned with the current strategy. This report provides a full accounting of the current state and a prioritized list of cleanup actions.

2. Root Domain (`robertmccoypromjcts.com`)

Status: Unchanged.

The root domain still presents the old portfolio structure, blending the CMGF research with the Organizational Knowledge Systems case studies. The Replit AI prompt to create `/research` and `/consulting` sections was not executed.

Audit Findings:

- **Navigation:** No "Consulting" or "Research" top-level links exist.
- **Content:** The homepage is the same as before the restructuring prompt was run.
- **Links:** All links on the homepage, including those to the six knowledge systems and the CMGF framework, are functional.

Recommendation:

- **Critical:** Re-run the restructuring prompt with Replit AI. The separation of "Consulting" and "Research" is the most important strategic change needed to support the new business development goal.

3. CMGF Section (Main Domain)

Status: Fully Functional and Demo-Ready.

This is the most successful part of the recent updates. The end-to-end workflow required for the CCME demo is working as intended.

Audit Findings:

- `/demo` : The main demo orchestration page loads correctly.

- **/sm-hub** : The Service Member Hub form is functional. Submitting a request correctly creates a case.
- **/isr** : The ISR Queue correctly displays the newly created case. The advisor actions (Run Analysis, Approve) are functional.
- **/audit** : The Audit Trail Explorer correctly displays the full, chronological audit log for the submitted and approved case, including all payloads.

Recommendation:

- **None.** This section is ready for the CCME presentation. Do not make further changes to these core components before the conference.

4. Legacy Subdomains

Status: Redundant and Misaligned.

Several subdomains now contain outdated or conflicting information. They create a confusing user experience and undermine the professionalism of the main site.

Subdomain	Status	Issues
cmgfdemo.robertmccoyprojects.com	Deprecated	Shows old "Planned/Concept/Active" module status. The main site's demo is now the source of truth.
certdemo.robertmccoyprojects.com	Partially Deprecated	The Credential Sequencing Engine is a valuable asset, but it exists in isolation with an outdated UI.
construction , hvac , etc.	Active	These six knowledge systems are functional but are not framed as consulting case studies.

Recommendations:

- **Immediate:** Decommission the cmgfdemo subdomain entirely. Redirect it to robertmccoyprojects.com/demo .
- **Short-Term:** Integrate the Credential Sequencing Engine from certdemo into the main site as a standalone tool or a feature within the new "Consulting" section. Update its UI to match the main site's design system.

- **Mid-Term:** Reframe the six knowledge system case studies on the main site. Instead of linking out to separate subdomains, create a single, detailed "Case Studies" page within the "Consulting" section that describes the problem, the architectural solution, and the business impact for each one, using screenshots and diagrams.

5. Final Prioritized Action Plan

1. **Re-run the Replit AI prompt** to create the `/consulting` and `/research` sections on the main site. This is the top priority.
2. **Decommission `cmgfdemo`** and redirect it to the main demo page.
3. **Begin designing the new "Consulting" homepage** and the integrated "Case Studies" page.

This audit confirms that the most critical component for your immediate goal (the CCME presentation) is secure and functional. The remaining work is to align the rest of the portfolio with your new strategic direction as a consulting service provider.
